* 'Game Clock' is the expected GPU clock when running typical gaming applications, set to typical TGP (Total Graphics Power). Actual individual game clock results may vary.
* 'Boost Clock' is the maximum frequency achievable on the GPU running a bursty workload. Boost clock achievability, frequency, and sustainability will vary based on several factors, including but not limited to: thermal conditions and variation in applications and workloads.

FEATURES

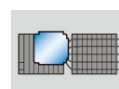

Dual BIOS

Choosing the BIOS that fits your need: better overclocking or silent operation.

Triple Ring-Fan

The 3X100mm Ring-fan design improves the cooling performance.

GPU Direct-Contact Copper Plate

A large copper plate provides direct contact with the GPU while covering VRAM area to increase the heat transfer threshold to the max.

Intelligent Fan Controller

Utilizing temperature detection from a smart chip, fans will start running when the GPU reaches 60°C and shut down below 50°C.

PowerColor Keystone

Keystone unifies your PowerColor devices in one hub. Customize lighting patterns, tweak DPI and macros, or adjust DTS and EQ settings. It's all about simple, powerful control for serious gamers.

Hellstone

Hellstone RGB lighting adds a powerful, gem-inspired radiance to your graphics card. Designed for PowerColor's Red Devil series, it creates a fierce, customizable light show that stands out in any build.
